Alanfould Nursery
Street Road, One Mile West of Easton Road
NESHAMINY, BUCKS CO., PA.
SIX MILES ABOVE WILLOW GROVE

We offer herewith many rare plants, never before offered to amateurs in small sizes and at ridiculous prices. They are easier to grow than perennials and for a few dollars and a few years' patience you can obtain a collection of plants that would cost hundreds at regular retail prices. Establish a small nursery in your garden, planting therein a number of items from this list; then in two to four years you will have something to give your friends produced by your hands and nothing is more appreciated as a gift by most people than a rare plant. So many rare and unusual plants are offered here that we can only give very short descriptions of their beauty. Most of them are described in Hotte's books on shrubs and trees, or in "Chinese" E. H. Wilson's book, Aristocrats of the Garden. Many of the plants listed here were introduced by Dr. Wilson. All plants packed well with wet peat moss or sphagnum moss.

For \$5.00 you can select \$8.00 worth of plants from this list. Prices include packing and postal charges. As we sell our plants at such low prices no order for less than \$2.00 will be accepted. No broken lots will be sold. Where order calls for 5 for 50 cts., one will not be sold for 10 cts. 5 must be ordered.

Owing to our careful packing with wet peat moss; the cost of Express and Parcel Post to points beyond Rocky Mountains, eliminate the profits. Therefore, please add 10% to remittances from these places.

The group containing Azaleas and Rhododendrons are easy to handle if planted in part shade, provided either by a building or a lath screen; this should be elevated 4' to 5' on stakes to provide free circulation of air underneath. Plant in a soil mixture containing 50% good light garden loam and 50% granulated peat moss or oak leaf mould. Water well after planting and mulch with leaf mould or peat moss. Do not cultivate but pick weeds out by pulling. Do not allow ground to get dry, but do not water too much or too often, there is a happy medium. These plants will all do well in part shade and also in sun. Cut off 75% of light for first 6 weeks and then 50%.

AZALEAS, RHODODENDRONS AND OTHER ACID LOVING PLANTS:

"Chinese" E. H. Wilson said, speaking of Azaleas, "They are not surpassed in wealth of blossom by any class of hardy shrubs. The flowers vary enormously in size in the different species and embrace all shades of every color except blue. In many the flowers are delightfully fragrant, — small wonder the desire to possess them is so general. No class of shrubs possess greater attractions, and given certain essential conditions and provided the varieties are perfectly hardy their culture is fairly simple."

A Philadelphia collection of Azaleas and Rhododendrons is visited each year by thousands of people who marvel at the brilliant, vivid colors and profusion of bloom, which is almost unbelievable, and yet for a few dollars and a bit of patience a more extensive range of colors and varieties is available from this list. Transplants are one to two years older than seedlings and will make a fair sized blooming plant in one or two years.

In winter time American gardens present a dismal, naked sight that emphasizes the general dreariness of the season. Little of the beauty of spring, summer or fall remains. Yet it is so easy to change this with a few evergreen vines, shrubs and trees and some bright berried shrubs. With an attractive evergreen background, winter seems shorter and much more pleasant and nothing is a more beautiful sight than to see them partly covered with snow.

EVERGREEN TREES AND SHRUBS. Plant in any good soil. All should be well shaded for 2 months after planting with a lath shade or planted in part shade of a building. Mulch with either peat moss or leaf mould. Most of the following plants will make handsome specimens in three to four years.

The Abies or Firs are among the most beautiful of all evergreens, the trees forming regular pyramids and having their branches in whorls; in general appearance they are similar to the spruces. Much of the beauty of the Northland is due to the Firs.
